Utilizing TF-CBT to Treat Traumatic Grief Due to Domestic Violence: A Case Study
CONFLICT OF INTEREST DECLARATION

There are no relationships with sources of commercial support, e.g., pharmaceutical companies and/or corporations whose products or services are related to pertinent therapeutic areas.
Goals and Objectives

Goal: To gain an understanding of the impact of domestic violence on a child’s grief process and to learn strategies for working with children experiencing traumatic grief when domestic violence is involved.

- Objectives
  - Participants will be able to explain how grief is impacted when domestic violence is involved.
  - Participants will be able to identify effective intervention strategies used to complement and enhance the use of TF-CBT TG with special cases.
Childhood Traumatic Grief

- When?
- What?
- How?
Grief

Uncomplicated Grief

- Experiencing
- Accepting
- Recognizing
- Continuing

Complicated Grief

- Re-experiencing
- Avoiding
- Arousal

Case Study

Confidentiality- de-identified

- 12 year old – Donna, assigned to Allegra
- 15 year old- Amy, assigned to Patti
- Adult sister/guardian – Kristin, assigned to Becca
TF-CBT Components: PRACTICE

- Psychoeducation/Parenting Skills
- Relaxation
- Affect Regulation
- Cognitive Coping
- Trauma Narrative
- In-vivo Exposure
- Conjoint Sessions
- Enhancing Future Safety

Source:
Grief Components

- Grief Psychoeducation
- Grieving the Loss and Resolving Ambivalent Feelings
- Preserving Positive Memories
- Redefining the Relationship & Committing to Present Relationships

Source:
Adaptations

- TF-CBT skills learned/practiced as Family
- Caregiver Group
- Grief components
Local Evaluation Data

- Eighty-nine of the 99 clients (90%) who completed the general trauma timeline experienced or witnessed more than one type of traumatic event.
  - 10 clients experienced or witnessed one trauma type.
  - 50 experienced between 2 and 4 types of traumatic events.
  - 36 clients experienced between 5 and 8 types of traumatic events.
  - 3 clients experienced between 9 and 14 types of traumatic events.
  - None of the clients experienced more than 14 trauma types.
- The average number of types of traumas per client is 4.
Data Interpretation:

Mean reduction in TSCC-A Scores:
Loss Group (29)= 8.9 Violence Group (53)= 9.54
Mean reduction in sisters’ scores: 24.5

The mean decrease in TSCC-A scores for these sisters was greater than the mean reduction in scores for both the loss and violence groups.
Data Interpretation:

Mean reduction in PTSD-RI Scores:
Loss Group (29)= 6.79 Violence Group (53)= 11.87
Mean reduction in sisters’ scores: 17

The mean decrease in PTSD-RI scores for these sisters was greater than the mean reduction in scores for both the loss and violence groups.
